SIMPLE PROGRAMME · UNFPA BANGLADESH · HANDOVER PACK

Troubleshooting Playbook

The twelve situations that actually happen, and the fix for each · symptoms in Bangla for the field, detail in English for the office · Version 1.0 · August 2026 · Prepared by the M&E Advisor for CIPRB

#1 ড্যাশবোর্ডে সংখ্যা কম, অথচ মাঠ বলছে কাজ হয়েছে

Dashboard shows fewer numbers than field activity

Why it happens: Records land as PENDING and only count after approval. The pending banner on each partner page shows the backlog.

Fix: Open the Approvals queue and clear it; numbers update immediately. This one cause explains most missing-data complaints in the programme so far.

Who: Partner manager (Bandhu is two-stage: manager, then UNFPA)

#2 ফোনের ড্রপডাউনে রোগী বা ক্লায়েন্টকে পাওয়া যাচ্ছে না

A registered person is missing from a form dropdown

Why it happens: The lookup list on the phone refreshes only when the form is re-downloaded; someone registered minutes ago is not on the cached copy yet.

Fix: KoboCollect → Get Blank Form → re-download the form. NEVER re-register the person: that creates a duplicate (this exact mistake registered fistula patient 2-0028 twice in August 2026).

Who: Field worker; supervisors remind teams after every form update

#3 একই ব্যক্তি দুইবার নিবন্ধিত হয়ে গেছে

The same person appears registered twice

Why it happens: Usually a re-registration after the dropdown miss above; occasionally two workers register the same person independently.

Fix: Do not delete anything first. Verify with the field which record is true, take an XLSX backup, then remove the duplicate in Kobo AND inform CIPRB M&E so the dashboard is reconciled. Same name + same mobile in the approval queue is the tell.

Who: Supervisor verifies; CIPRB M&E reconciles

#4 জমা Kobo-তে আছে, ড্যাশবোর্ডে নেই

A submission exists in Kobo but not on the dashboard

Why it happens: The webhook delivery failed at the moment of submission (brief outage or restart). Kobo retries failed deliveries automatically, so most recover within hours.

Fix: Wait a few hours first. If still missing: the delivery log is under the Kobo project Settings → REST Services; a trivial edit-and-resubmit of the record in Kobo fires a fresh delivery, or a developer can run the replay utilities in the codebase.

Who: CIPRB M&E detects; developer replays if needed

#5 ব্যানারে N awaiting approval, কিন্তু কিউ খালি

The pending banner counts records the queue does not show

Why it happens: Historically a real bug: stock entries were counted but not listed (fixed 14 Aug 2026). If it recurs, a record type is missing from the approval-queue registry.

Fix: Hard-refresh (Ctrl+F5) first. If the mismatch persists, report to the developer: a model needs adding to _APPROVAL_MODELS in programs/views.py.

Who: Manager reports; developer fixes

#6 মাসিক রিপোর্ট ফাঁকা বা insufficient data বলছে

A monthly report renders empty or declares insufficient data

Why it happens: The month genuinely has too few APPROVED records, or approvals are sitting in the queue.

Fix: Clear approvals, then regenerate the month from the Reports page. The report family refuses to chart thin data by design; that is honesty, not a bug.

Who: CIPRB M&E

#7 সাইট খুলছে না

The site is down

Why it happens: Three usual causes: Railway usage hit the $10 limit (services stop), the monthly payment failed, or a bad deploy.

Fix: Check railway.app project status and account usage. Limit hit: raise the limit and the service resumes. Payment failed: fix the card. Bad deploy: redeploy the previous build. The database survives all three.

Who: Railway account holder / developer

#8 এডিট করলাম কিন্তু কিছু বদলালো না

An edit did not save

Why it happens: The Enketo edit screen only saves when the orange Submit button at the very bottom is pressed; closing the tab discards everything.

Fix: Re-open the record (pencil icon), repeat the change, scroll to the bottom, press Submit, wait for the confirmation message.

Who: Whoever edits

#9 ভুল করে রেকর্ড ডিলিট হয়ে গেছে

A record was deleted by mistake

Why it happens: Kobo deletion is permanent; there is no recycle bin.

Fix: Recover the values from the latest XLSX backup, or ask CIPRB M&E for the dashboard copy of the record (it survives Kobo deletion), then re-enter it as a fresh submission and inform CIPRB M&E so the counts reconcile.

Who: Supervisor + CIPRB M&E

#10 এক্সপোর্ট করা ফাইলে নাম বা ফোন নম্বর উদ্ভট অক্ষর

Names or phone numbers look like gibberish in database exports

Why it happens: GBV and fistula identifiers are encrypted at rest by design; database-level exports show ciphertext. Only the dashboard decrypts them, for authorised roles.

Fix: Nothing is broken. Use the dashboard for identified views, or the Kobo XLSX export (plaintext under Kobo access control) when a full export is genuinely needed.

Who: Awareness only

#11 ডেটা দেওয়া হয়েছে, তবু ইন্ডিকেটরে শূন্য

An indicator shows zero although data was submitted

Why it happens: Either the records are unapproved (see #1), or the indicator feeds from a different form than assumed, or the activity has not started per the workplan.

Fix: Check the approval queue first, then consult the Indicator Data Dictionary in this pack for exactly which form and condition feeds that indicator.

Who: CIPRB M&E

#12 মোবাইলে ফর্মের নতুন সংস্করণ আসছে না

A phone does not get the updated form

Why it happens: KoboCollect never updates forms silently; it keeps its cached version until asked.

Fix: KoboCollect → Get Blank Form (internet on) → re-download. If the form list itself fails, re-check the server URL / QR settings in KoboCollect.

Who: Field worker
